| Preface  | ix |
| WELCOME ADDRESSES  | 1  |
| A.J. Baer<br>Solar high-temperature technologies – fact and fiction  | 2  |
| S.F. Garriba<br>Prospects for international collaboration on energy technology and role of the IEA                                 | 4  |
| INTRODUCTION   | 19 |
| P. Kesselring<br>The 1990 Symposium on Solar High-Temperature Technologies – a survey  | 20 |
| C.-J. Winter<br>High-temperature solar energy utilization after 15 years R&D: kick-off for the<br>third generation of technologies | 26 |
| B.P. Gupta and J.V. Anderson<br>Solar detoxification of hazardous waste – an overview of the U.S. Department of<br>Energy program  | 40 |
| G.W. Braun, A. Suchard and J. Martin<br>Hydrogen and electricity as carriers of solar and wind energy for the 1990s and<br>beyond  | 62 |
| ELECTRICITY GENERATION   | 77 |
| Plenum Papers  |    |
| P. DeLaquil<br>Prospects for solar thermal electricity generation – an introduction  | 78 |
| W. Grasse<br>PHOEBUS – international 30 MW <sub>e</sub> solar tower plant  | 82 |

|  |     |
|--|-----|
| <b>W. Meinecke, M. Kiera and P. Wehowsky</b>   |     |
| 30 MW <sub>e</sub> PHOEBUS feasibility study: results of system engineering            | 95  |
| <b>G.W. Braun, D. Kearney and D.S. Shugar</b>  |     |
| Comparison of bulk power solar peaking options in the 1990s                            | 108 |
| <b>M. Kiera, W. Meinecke and H. Klaiss</b>   |     |
| Energetic comparison of solar thermal power plants                                     | 121 |
| <b>P.C. Klimas, R.B. Diver and J.M. Chavez</b>   |     |
| United States Department of Energy solar receiver technology development               | 136 |
| <b>P. DeLaquil, B. Kelly and R. Lessley</b>  |     |
| Solar One Conversion Project   | 151 |
| <b>P.C. Klimas and M. Becker</b>   |     |
| Status of second-generation central receiver technologies                              | 162 |
| <b>J.M. Chavez and C. Chaza</b>  |     |
| Testing of a porous ceramic absorber for a volumetric air receiver                     | 172 |
| <b>M. Böhmer and C. Chaza</b>  |     |
| The ceramic foil volumetric receiver   | 182 |
| <b>T. Menigault, G. Flamant and B. Rivoire</b>   |     |
| Advanced high-temperature two-slab selective volumetric receiver                       | 192 |
| <b>M. Posnansky and T. Pylkkänen</b>   |     |
| Development and testing of a volumetric gas receiver for high-temperature applications | 204 |
| <b>F. Miller and R. Koenigsdorff</b>   |     |
| Theoretical analysis of a high-temperature small-particle solar receiver               | 210 |
| <b>M. Müller</b>   |     |
| Test loop for research on direct steam generation in parabolic trough power plants     | 222 |
| <b>J. Kleih</b>  |     |
| Dish-Stirling test facility  | 231 |
| <b>ELECTRICITY GENERATION</b>  |     |
| <b>Forum Papers</b>  | 239 |
| <b>A. Glück, R. Tamme, H. Kalfa and C. Streuber</b>                                    |     |
| Investigation of high temperature storage materials in a technical scale test facility | 240 |
| <b>H.W. Fricker</b>  |     |
| High-temperature heat storage using natural rock                                       | 249 |
| <b>A. Meier, C. Winkler and D. Wuillemin</b>   |     |
| Experiment for modeling high temperature rock bed storage                              | 255 |

|   |     |
|---|-----|
| <b>M. Epstein, D. Liebermann, M. Rosh and A.J. Shor</b>   |     |
| Solar testing of 2 MW <sub>th</sub> water/steam receiver at the Weizmann Institute solar tower                    | 265 |
| <b>R. Koenigsdorff and P. Kienzle</b>   |     |
| Results of and prospects for research on direct-absorption fluidized bed solar receivers                          | 279 |
| <b>F. Reale, G. Ruocco, A. Carotenuto, U. Nocera and F. Bonomo</b>  |     |
| Final design of a multi cavity volumetric solar receiver  | 284 |
| <b>R. Pitz-Paal, J. Morhenne and M. Fiebig</b>  |     |
| A new concept of a selective solar receiver for high temperature applications                                     | 293 |
| <b>D.J. Alpert, T.R. Mancini, R.M. Houser, J.W. Grossman, P. Schissel, M. Carasso, G. Jorgensen and M. Scheve</b> |     |
| Solar concentrator development in the United States   | 307 |
| <b>M. Romero, E. Conejero and M. Sanchez</b>  |     |
| Recent experiences on reflectant module components for innovative heliostats                                      | 320 |
| <b>W. Durisch, J. Keller, B. Hofer, W. Bulgheroni, M. Brack and H. Riegraf</b>                                    |     |
| Ground- and satellite-based meteo-data for solar thermal power stations in Jordan                                 | 333 |
| <b>A. Roy</b>   |     |
| Standards for solar power systems – performance reporting   | 348 |
| <b>SOLAR DRIVEN CHEMISTRY</b>   | 363 |
| <b>Plenum Papers</b>  |     |
| <b>R. Sizmann</b>   |     |
| Solar chemistry – an introduction   | 364 |
| <b>K.-H. Funken</b>   |     |
| Solar chemistry: classification, criteria, and identification of R & D deficits                                   | 370 |
| <b>R. Tamme, U. Taut, C. Streuber and H. Kalfa</b>  |     |
| Energy storage development for solar thermal processes  | 386 |
| <b>R. Emmenegger, H.R. Oswald and A. Reller</b>   |     |
| UV/VIS/IR-induced heterogeneous processes of transition metal carbonates and transition metal oxides              | 397 |
| <b>M. Tanaka and T. Sakakura</b>  |     |
| Homogeneous catalysis for direct functionalization of hydrocarbons under irradiation                              | 406 |
| <b>C. Etiévant</b>  |     |
| Solar high-temperature direct water splitting – a review of experiments in France                                 | 413 |
| <b>M. Böhmer, U. Langnickel and M. Sanchez</b>  |     |
| Solar steam reforming of methane  | 441 |

|  |     |
|--|-----|
| R. Buck, J.F. Muir, R.E. Hogan and R.D. Skocypc<br>Carbon dioxide reforming of methane in a solar volumetric receiver/reactor: the<br>CAESAR project                               | 449 |
| R. Levitan, M. Levy, H. Rosin and R. Rubin<br>Closed-loop operation of a solar chemical heat pipe at the Weizmann Institute<br>solar furnace                                       | 464 |
| G. Ingel, M. Levy and J. Gordon<br>Gasification of oil shales by solar energy  | 478 |
| C. Sasse<br>Optical properties of single particles for solar heated fluidized beds   | 490 |
| W.E.C. Pitzkow<br>Pressure loaded volumetric ceramic receiver  | 498 |
| W. Durisch<br>Some physical and chemical experiments under concentrated solar radiation and<br>some thermodynamic considerations   | 508 |
| C. Revilliod, A.J. McEvoy and M. Grätzel<br>High intensity simulated solar irradiation: effect on the kinetics of a methanation<br>reaction  | 522 |
| J.V. Anderson, H. Link, M. Bohn and B.P. Gupta<br>Development of solar detoxification technology in the USA – an introduction  | 538 |
| A. Lewandowski, C. Bingham, J. O'Gallagher, R. Winston and D. Sagie<br>Performance characterization of the SERI High-Flux Solar Furnace  | 550 |
| D. Bahnemann, D. Bockelmann and R. Goslich<br>Mechanistic studies of water detoxification in illuminated $TiO_2$ suspensions   | 564 |
| D.M. Blake, J. Webb, C. Turchi and K. Magrini<br>Kinetic and mechanistic overview of $TiO_2$ -photocatalyzed oxidation reactions in<br>aqueous solution                            | 584 |
| D.J. Alpert, J.L. Sprung, J.E. Pacheco, M.R. Prairie, H.E. Reilly, T.A. Milne and<br>M.R. Nimlos<br>Sandia National Laboratories' work in solar detoxification of hazardous wastes | 594 |
| E. Zarza, J.I. Ajona, J. León, A. Gregorzewski and K. Gentner<br>Solar thermal desalination project at the Plataforma Solar de Almeria   | 608 |
| <b>SOLAR HIGH-TEMPERATURE TECHNOLOGY IN RUSSIA</b>   | 623 |
| Introductory note by the organizing committee  | 624 |
| T.T. Riskiev and S.K.H. Suleimanov<br>Double mirror polyheliostat solar furnace of 1000 kW thermal power   | 625 |

|  |     |
|--|-----|
| <b>V.I. Anikeev and V.A. Kirillov</b>  |     |
| Basic design principles and some methods of investigation of catalytic reactors-receivers of solar radiation | 633 |
| <b>SOLAR DRIVEN CHEMISTRY</b>  | 647 |
| <b>Forum Papers</b>  |     |
| H. Klaiss, J. Meyer, M. Kiera, W. Meinecke and F. Staiss   |     |
| Costs and revenues of renewable electricity production systems   | 648 |
| G.C. Glatzmaier, T.A. Milne, C. Tyner and J. Sprung  |     |
| Innovative solar technologies for treatment of concentrated organic wastes                                   | 672 |
| O. Weinmann, K.-H. Funken, K.F. Knoche and R. Sizmann  |     |
| Thermal recovery of waste sulfuric acid with concentrated solar radiation                                    | 674 |
| M. Sanchez and A. Sevilla Portillo   |     |
| Review of PSA activities in the area of solar thermal energy conversion                                      | 683 |
| K. Huder   |     |
| Investigation of methane reforming with energy supplied by direct absorption of concentrated radiation       | 696 |
| M. Romero, F. Sobrón and L.F. Puebla   |     |
| Performance of a CRS with stretched membrane heliostats for steam reforming of methane                       | 707 |
| P. Heller  |     |
| Optimization of windows for closed receivers and receiver-reactors: enhancement of optical performance       | 720 |
| A. Segal and M. Levy   |     |
| Computer modelling of a solar chemical reactor   | 725 |
| A. Imhof   |     |
| The cyclone reactor – an atmospheric open solar reactor  | 733 |
| P. Kuhn and A. Hunt  |     |
| A new solar simulator to study high temperature solid-state reactions with highly concentrated radiation     | 742 |
| A.J. Vázquez, G.P. Rodriguez and J. de Damborenea  |     |
| Surface treatment of steels by solar energy  | 751 |
| <b>EVALUATION</b>  | 761 |
| P. Kesselring  |     |
| Symposium results – outcoming of evaluation sessions   | 762 |
| Address list of authors and coauthors  | 769 |
| Author index   | 777 |
